The FamilySearch Indexing and Linking Tool
Grant Echols, Principal Engineer
FamilySearch
gechols@familysearch.org

INTRODUCTION
The process of indexing records began well before digital images became commonplace. FamilySearch and others have been indexing images for decades. This has created a wealth of records with no association to the digital images they belong to. The result is that researchers can see the record data but not the images. FamilySearch wants to remove this research impediment by associating these records with their images in a process we call linking.

The linking tool will present the volunteers with a list of the records previously indexed and the digital film they came from. The volunteers are then able to search and navigate through the records and link them to the appropriate images.

This presentation will explain the work to be done and give a demonstration of the tool in action.
