By Brand Niemann

Published: July 26, 2012

_Data.gov_ has been around for about three years now and is touted as the prime example of the Open Government Data Initiative based on its growth in number of data sets and communities using them. However, there have been two activities that have been around much longer, with more high-quality data sets, and a larger community, namely [FedStats.gov](http://www.fedstats.gov) and [FedStats.net](http://www.fedstats.net), which deserve continued attention in the government data community.

I was part of the FedStats Team that built FedStats.gov and led the FedStats.net Team. (You can read more about that team in a related [story](https://www.fedstats.gov/communities/)) We received the Gore Hammer Award for that work to "Reinvent Government." While Data.gov has helped focus attention on available government data, I see trying to reinvent that reinvention without the expertise that we had across the government at that time. The Data.gov Agency Points of Contact are not the same as the Federal Statistics Community.

For more news and insights on innovations at work in government, please sign up for the [AOL Gov newsletter](https://www.aol.com/). For the quickest updates, like us on [Facebook](https://www.facebook.com).

I always felt the OMB Office of Information and Regulatory Affairs (OIRA) Statistical Programs & Standards (Katherine Wallman, Chief Statistician of the US Government) should have a major role in the Open Government Data Initiative. When asked if GSA was the right agency to do Data.gov, I recommended the Census Bureau - the government data agency that produces the data book - the Annual Statistical Abstract.

The [FedStats Agency Information](http://www.fedstats.gov) is the data catalog for the US Government of high quality data sets with contact information for the subject matter experts and the metadata behind the data! I had forgotten how good a data catalog we had built back in 2007. Interestingly, the category with the largest number of data sets is health which rivals the new [HealthData.gov](http://www.healthdata.gov).

For those interested in exploring the data available at [FedStats.gov](http://www.fedstats.gov), I created a data-driven document [dashboard](https://www.fedstats.gov/dashboards) like FedStats.net which is based on the [2012 Annual Statistical Abstract](http://www.fedstats.gov) document. I provide well-defined Web addresses to the 95 US Statistical Programs along with their contact information and 346 individual data sets.

Here's an example of a slice of those data sets:

I also picked a more local data set: HUD State Of The Cities Data Systems and one data set specifically to show how...
the FedStats Statistical Programs Catalog can be used to drill down from national to agency local high quality data. This is similar to what was done in analyzing content of the 2012 International Open Government Data Conference which I commented on further in a recent story.

As was noted in a remark attributed to me in another story on government data, Officials Explore New Ways To Tap Value Of Global Government Data, many of the government's data sets are not as accessible or as easy to use as the government agencies would like people to think.

FedStats.gov is a noteworthy example of having done a better job of that in many ways, and over many more years.

---

**Story**

**FedStats.gov: Celebrating over 15 years of making statistics from more than 100 agencies available to citizens everywhere**

Data.gov has been around for about three years now and is touted as the prime example of the Open Government Data Initiative based on its growth in number of data sets and communities using them. However, there have been two activities that have been around much longer, with more high-quality data sets, and a larger community, namely FedStats.gov and FedStats.net. I write about the later in a related story.

I was part of the FedStats Team that build FedStats.gov and lead the FedStats.net Team. We received the Gore Hammer Award for that work to Reinvent Government. I see Data.gov as trying to reinvent that reinvention without the expertise that we had across the government at that time. The Data.gov Agency Points of Contact are not the same as the Federal Statistics Community.

I always felt the OMB Office of Information and Regulatory Affairs (OIRA) Statistical Programs & Standards (Katherine Wallman, Chief Statistician of the US Government) should have a major role in the Open Government Data Initiative. When asked if GSA was the right agency to do Data.gov, I recommended the Census Bureau - the government data agency that produces the data book - the Annual Statistical Abstract.

The FedStats Agency Information is the data catalog for the US Government of high quality data sets with contact information for the subject matter experts and the metadata behind the data! I had forgotten how good a data catalog we had built back in 2007. Interestingly, the category with the largest number of data sets is health which rivals the new HealthData.gov.

I gave well-defined Web Addresses to the 95 US Statistical Programs along with their contact information and 346 individual data sets! One can see that from the following example:

10.1. Administration For Children And Families

- 10.1.1. Adoption
- 10.1.2. Child Abuse
I also picked a more local data set: HUD State Of The Cities Data Systems and one data set specifically to show how the FedStats Statistical Programs Catalog can be used to drill down from national to agency local high quality data. This is similar to what was done in the 2012 International Open Government Data Conference Analytics for my recent story.

For a recent story on Officials Explore New Ways To Tap Value Of Global Government Data, I commented: It is much more than: Many of the government's data sets are not as accessible or as easy to use as the government agencies would like people to think, notes data scientist (and AOL Government contributor) Brand Niemann. It is: Is There a Business Case for Open Government Data? and that FedStats.gov has done a better job of it over many more years.

---

**What is FedStats?**

FedStats, which has been available to the public since 1997, provides access to the full range of official statistical information produced by the Federal Government without having to know in advance which Federal agency produces which particular statistic. With convenient searching and linking capabilities to more than 100 agencies that provide data

https://semanticommunity.info/Other/FedStats.gov
Updated: Sun, 15 Sep 2019 13:17:07 GMT
Powered by [mindtouch](http://www.mindtouch.com)
and trend information on such topics as economic and population trends, crime, education, health care, aviation safety, energy use, farm production and more, FedStats is your one location for access to the full breadth of Federal statistical information.

Who is FedStats?

FedStats provides information for Federal Agencies that are listed in Statistical Programs Of The United States Government and reporting expenditures of at least $500,000 per year in one or more statistical activities including:

- planning of statistical surveys and studies, including project design, sample design and selection, and design of questionnaires, forms, or other techniques of observation and data collection
- training of statisticians, interviewers, or processing personnel
- collection, processing, or tabulation of statistical data for publication, dissemination, research, analysis, or program management and evaluation
- publication or dissemination of statistical data and studies
- methodological testing or statistical research
- data analysis
- forecasts or projections that are published or otherwise made available for government-wide or public use
- statistical tabulation, dissemination, or publication of data collected by others
- construction of secondary data series or development of models that are an integral part of generating statistical series or forecasts
- management or coordination of statistical operations
- statistical consulting or training

Some Principal Statistical Programs, such as labor force statistics and energy statistics, are carried out by agencies (the Bureau of Labor Statistics and the Energy Information Administration, respectively) whose sole missions are statistical. In other cases, agencies have statistical programs that support their program planning and evaluation functions.

How do I find information on FedStats?

- **Topics A To Z**: More than 400 topics that range from acute conditions (colds and influenza) through weekly earnings.
- **Program/Subject Areas**: Link to summaries of the major statistical programs including agriculture, education, energy, environment, health, income, labor, national accounts, safety, and transportation.
- **Agencies**: If you know the name of the agency, you can select it from our agency list, browse key statistics, and look up contact information.
- **Search**: Enter your key words or phrases. FedStats searches all of the linked agencies (or those you specify); then provides a list of links to the documents it finds. Our search database is updated twice per month for each agency web site.
- **Press Releases**: For the most current information, browse our topic on press releases or search our database, which is updated daily, for links to releases from the principal statistical agencies.

How do I find information for my county or State on FedStats?

Use MapStats to profile your State, county, Federal judicial district, or congressional district. Just select the name from

**Privacy Statement**

Thank you for visiting **FedStats** and reviewing our privacy policy. We do not collect personal information about you when you visit our website unless you choose to provide that information to us. We do not give, share, sell, or transfer
any personal information to a third party.

Information collected and stored automatically

- We analyze user traffic patterns on FedStats from information automatically provided by your browser when you visit our site. This information includes the IP address of your computer or network, the date, time, and page you visited on our site, your browser and operating system, and the referring page (the last webpage you visited before clicking on a link to FedStats).

  We use the aggregated information from all of our visitors to measure server performance and improve the content of our site.

- We sometimes track the keywords that are entered into our search engine to measure interest in specific topics, but we do not track which terms a particular user enters.

Information provided by you

- Information volunteered by you through your filling out of our optional online feedback form is used to help us enhance FedStats and other Federal agency web sites, and may be shared with Federal employees and contractors for that purpose.

- We do not use "cookies". (A "cookie" is a file placed on your hard drive by a Web site, usually without your knowledge).

Links to other sites

- FedStats uses link and search capabilities to navigate publicly available statistics from more than 100 Federal agencies. The privacy policies and procedures described here do not necessarily apply to those sites. We suggest contacting these sites directly for information on their data collection and distribution policies.

Site security

- We monitor network traffic to identify unauthorized attempts to upload or change information or to otherwise cause damage to the site. Anyone using this Web site expressly consents to such monitoring.

Document Accessibility Statement

FedStats is committed to making every web page on its World Wide Web server accessible to all possible audiences, including the visually impaired, those with limited mobility, and those who are working with slower computers, browsers and modems.

Many of the documents on the FedStats website are in HTML format. These documents are accessible to persons using screen reading software. We also have documents in Adobe Acrobat PDF (Portable Document Format) files. Currently, many people using screen reading devices cannot read documents in PDF format.

Adobe Systems, Inc., is producing various products designed to make Adobe Acrobat documents accessible to persons using screen reading software. Their Accessibility Web Pages describe their efforts. They also have a free
downloadable accessibility plug-in, called Adobe Access, for use with the latest versions of the Adobe Acrobat Reader for Microsoft Windows 3.1, Windows 95, or Windows NT. This plug-in helps to overcome some of the problems of reading PDF documents with screen readers. While these tools are in development, we are committed to providing HTML versions of these PDF files.

FedStats uses link and search capabilities to help you navigate publicly available statistics from over 100 Federal agencies. Our statement on accessibility described here does not necessarily apply to those sites. We suggest contacting these sites directly for their positions on accessibility.

MapStats

Source: http://www.fedstats.gov/qf/

Download the Database

Source: http://www.fedstats.gov/qf/download_data.html

MY NOTE: Downloaded all 9 and put them in the spreadsheet

Overview

The entire MapStats state & county profiles dataset, with U.S., state, and county data is available for download. Downloadable data files for cities may be issued later. The current downloadable data set may include items not displayed on MapStats tables.

- **DataSet.Txt** -- 3196 rows, one for the U.S., one for each state, one for each county, but no column headings. Each row is identified by a 5-digit combined state and county code. Data are comma-delimited.
- **DataDict.Txt** -- One row for each column in DataSet.txt. Flat ASCII files have mnemonic identifier, full title, number of decimals, and the U.S. total value (matching the first row of DataDict.txt)
- **FIPS_CountyName.Txt** -- FIPS and corresponding place names.
- **FIPS_CountyName_Jdistrict.Txt** -- FIPS, corresponding place names, Federal judicial district codes.
- **Judicial_District.Txt** -- Federal judicial district codes and corresponding labels.

Flags -- Some data items are represented by a flag.

- **DataFlags.Txt** -- 3196 rows, one for the U.S., one for each state, one for each county, but no column headings. Each row is identified by a 5-digit combined state and county code. Data are comma-delimited. Column headings follow those in the Data Dictionary file DataDict.txt.
- **FlagsDict.Txt** -- Flag codes and corresponding meaning.

You will need to obtain FIPS state and county codes from another source.

Footnotes -- Those footnotes that appear for all geographic areas are not shown here. Footnotes that are applicable
only to selected areas are provided in two files:

- **FootNotes.Txt** -- Footnotes are identified by mnemonic (shown in DataDict), the county to which they apply (identified by code), and the footnote key (a link into FootText.txt). There is one row for each instance of each footnote in this flat ASCII file.
- **FootText.Txt** -- Footnote key and its text

---

**To manipulate the data in Excel**

Open the file DataDict.txt. You will be prompted through the Text Import Wizard

1. Click Next
2. Click and drag the first break point to character 12
3. Double click on each other break point to delete it
4. Add in break points (single click) at characters 135, 139, 147, and 158
5. Click Next
6. Click Finish

Transpose information from each row to create column headings

1. Insert 6 blank rows at the top of the DataDict worksheet
2. Select cells starting with the one that reads STATECOU to the lower right cell
3. Copy it (Edit-Copy or Ctl-C)
4. Select cell A1
5. On the Edit menu, click Paste Special
6. Select the Transpose checkbox, and then click OK

Open DataSet.txt and work through the wizard

1. Make sure the radio button for Delimited is selected; click Next
2. Put a check mark next to Comma; click Next
3. Click the radio button for Text with the first column highlighted; for all other columns, the default General format is adequate; click Finish
4. Insert 5 blank lines at the top of the spreadsheet

Copy headings from DataDict to the top of the DataSet worksheet

1. Copy the first 5 lines of the DataDict into the first 5 lines of the DataSet spreadsheet
2. If the data values on line 5 agree with the data values on line 6, you are set.

Add in state and county names

1. In the DataSet spreadsheet, add a column to the left of column A to accept the county name
2. Open the file FIPS_CountName.txt in Excel
3. In the import wizard
   1. Select Fixed Width, then Next
   2. Move the break line to the start of the name (character 6), and click Next
   3. Click on the radio button next to Text while the first column is highlighted.
   4. Click Finish
4. Copy cells B1:B3196, and paste them into the DataSet spreadsheet, cell A9

Environmental Protection Agency

Monitors the quality of the air; drinking, surface, and ground water; ecosystem status; and the use and release of toxic or hazardous substances. EPA conducts research and studies to provide baseline data and to evaluate and support environmental monitoring systems. Projects include state and local programs to report ambient air quality levels of pollutants and estimated emissions of pollutants from major stationary sources, and projection of future air quality levels through models that take into account past air quality monitoring data and emissions data. Other statistical activities develop methods to document the distribution and determinants of exposure to pollutants experienced by the U.S. population, and methods to measure exposure to and the potential effects of pollutants on human health and ecosystems.

Federal Aviation Administration

Collects data on aviation safety.

Unruly Passengers
Runway Safety
FAA Operations & Performance
Publication: Administrator’s Fact Book

(FAA) Dept of Transportation
Maintains a worldwide agricultural market intelligence and commodity reporting service to provide U.S. farmers and traders with information on world agricultural production and trade for use in adjusting to changes in world demand for U.S. agricultural products. Reporting includes data on foreign government policies, analysis of supply and demand conditions, commercial trade relationships, and market opportunities. In addition to survey data, crop condition assessment relies heavily on computerized analyses of satellite, meteorological, agricultural, and related data. The FAS program serves as the analytical foundation for USDA's export programs and is an important source of information in trade policy efforts.

World Agricultural Production, Supply & Distribution
World Agricultural Trade

(FAS) Dept of Agriculture

The Uniform Crime Reporting program collects data on the incidence of criminal acts as reported by 17,000 local law enforcement agencies nationwide and includes the following statistical programs: the National Incident-Based Reporting System, Federal Crime Reporting, Hate Crime Statistics Collection, and Law Enforcement Officers Killed and Assaulted. Data are collected on the following categories that comprise the Crime Index: murder, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. Statistical information on arrests, property loss, and other factors relevant to criminal activity is also produced by the FBI.

Crime
Hate Crimes
Law Enforcement Officers Killed And Assaulted

(FBI) Dept of Justice
**Federal Emergency Management Agency**

Provides direct support to families and individuals recovering from disasters and evaluates disaster victims' satisfaction with services received and manner in which they were provided. FEMA also analyzes data from the National Incident Management System (NIMS) to help track compliance and implementation nationwide, to identify incident management and emergency related standards for potential adoption as NIMS standards for State and local government in compliance, and to test and evaluate the system.

(FEMA) Dept of Homeland Security

---

**Federal Highway Administration**

Collects, analyzes, and disseminates data on the Nation's highway system, including financing, travel, fuel consumption, vehicle registrations, highway system extent and safety, drivers licenses, and personal travel characteristics.

Publication: Highway Statistics  
National Household Travel Survey

(FHWA) Dept of Transportation

Federal Railroad Administration

Collects and disseminates data on the Nation's railroad system, including traffic, safety, and accident reports, such as intermodal safety data for the geographic information system, and information on grade crossings and inspections.

Railroad Traffic, Accidents, And Grade Crossings

(FRA) Dept of Transportation

Click for contact details
Forest Service

Conducts renewable resource inventories of forest lands and collects statistics on forest products. These data are used to identify trends in the extent, condition, ownership, and quantity and quality of timber and other natural resources.
Federal Transit Administration

Maintains the primary database for statistics on the transit industry known as the National Transit Database. These data, which must be reported by every FTA formula grant recipient, are used to report to the Congress on the performance of the transit industry, to make transit service and investment planning decisions, and to apportion FTA formula funds. The FTA also collects and analyzes data related to safety and security, including drug and alcohol testing results of safety sensitive personnel.

Fish And Wildlife Service

Conducts annual surveys to monitor the fish and migratory bird populations, track diseases of cultured and wild fish, measure the changing status of waterfowl and game bird populations, and evaluate harvests by fishermen and hunters. It also conducts surveys of fish and wildlife associated recreation by the U.S. public and satisfaction surveys of visitors to the National Wildlife Refuge System.

Endangered Species
National Survey Of Fishing, Hunting, And Wildlife-Associated Recreation

(FWS) Dept of Interior
Office Of The Assistant Secretary For Housing

Maintains and analyzes statistics on housing and property improvement loans and on housing or property insured or rehabilitated under HUD mortgage insurance programs, including the inventory of HUD-held mortgages or HUD-owned properties.

(HOUSING) Dept of Housing and Urban Development

Health Resources And Services Administration

Collects data on general health services, the health professions workforce, and resource issues related to access, equity, quality, and cost of care. HRSA maintains the Scientific Registry of Transplant Recipients and the National Bone Marrow Donor Registry.

U.S. Health Workforce Personnel Factbook
State Health Workforce Profiles

(HRSA) Dept of Health and Human Services

Indian Health Service

Provides vital event, demographic, social, and economic statistics on American Indians and Alaska Natives living in IHS service areas, as well as patient care and morbidity information for those who use IHS services.

Trends & Regional Differences In Indian Health

(IHS) Dept of Health and Human Services
Institute Of Museum And Library Services

Through grants, contracts and cooperative agreements, supports the collection and analysis of data about how the public uses libraries, museums and online resources to support learning throughout the lifetime. Recent topics explored include an analysis of the health information seeking behaviors of seniors, the long and short term impacts of museum and zoo visitation, an exploration of query behaviors of users of online information, and the role of public libraries and community technology centers in providing online government information.

(IMLS) Independent agency

International Trade Administration

Collects and disseminates data on imports, exports, production, prices, and foreign direct investment in the United States, as well as other economic data to analyze domestic and foreign market situations. ITA also tracks data on tourism industries and international travel to and from the United States for many private sector firms. The Office of Travel and Tourism Industries in ITA maintains a web site to provide current statistical data to U.S. companies on international travel to and from the United States; provides projections of international arrivals to the United States; and conducts the In-Flight Survey of International Air Travelers, partially funded by states, cities, and the private sector.

Commodity Trade, By Geographic Area
U.S. Aggregate Foreign Trade Data
Inbound And Outbound Tourism

(ITA) Dept of Commerce
Maritime Administration

Collects, maintains, and disseminates data on domestic and international transportation, vessel characteristics and itineraries, port facilities, shipbuilding and repair, ship values, financial reports and vessels' operating expenses, shipping activities, and maritime employment. MARAD also publishes reports on marine transportation and cruise passenger statistics, and conducts research on maritime issues.

Fleets
Cruises
Waterborne Trade

National Center For Education Evaluation And Regional Assistance

Conducts studies that assess the impact of education programs on academic achievement, particularly in the areas of reading, mathematics, and science. NCEE also reviews selected evaluation work supported by others outside the department to assess the quality of studies and the significance of such evaluations for improving education.
Click for contact details
National Center For Education Statistics

The principal Federal agency that collects and analyzes data on education in the United States. NCES maintains a survey program that provides information on children's health, early care, and early school experiences; on the condition of public and private education; and on libraries and information centers. It conducts studies of student financial aid, postsecondary faculty, and doctoral degree recipients, as well as transcript studies and various longitudinal studies. NCES collects and reports information on the academic performance of students as well as the literacy level of the adult population. The National Assessment of Educational Progress is NCES's primary tool for assessing what American elementary/secondary students know and can do in academic subjects. NCES also administers the Statewide Data Systems program, which provides grants to the states for the management and analysis of individual student data to improve student academic performance and close achievement gaps.

50th Percentile Rent Estimates

Source: [http://www.huduser.org/portal/datasets/50per.html](http://www.huduser.org/portal/datasets/50per.html)

Rent estimates at the 50th percentile (or median) are calculated for all Fair Market Rent areas. THESE ARE NOT FAIR MARKET RENTS. Under certain conditions, as set forth in the Interim Rule (Federal Register Vol. 65, No. 191, Monday October 2, 2000, pages 58870-58875), these 50th percentile rents can be used to set success rate payment standards.

[Click here](http://www.huduser.org/portal/datasets/50per.html) for information on Fair Market Rents.

**2012 50th PERCENTILE RENTS**

FY2012 50th Percentile Rents: [Read Me](http://www.huduser.org/portal/datasets/50per.html) (*.doc, 27 KB) MY NOTE: See below.

These files make available the 50th percentile rents for fiscal year (FY) 2012 by FMR area, county or county subarea.
(New England). THESE ARE NOT FAIR MARKET RENTS.

Under certain conditions, as set forth at 24 CFR §982.503(e), these 50th percentile rents can be used to set success rate payment standards. HUD has developed 50th percentile rents for this purpose. The success rate payment standards program has been in effect since FY 2001, therefore, these 50th percentile rents are only available back to FY 2001. Only if the FMRs are set at the 50th percentile are these rents the same as the FMR.

There is one record per county or county subarea (New England town). The rents for all component counties of a metropolitan Fair Market Rent Area ("MSA") or HUD Metropolitan FMR Area (HMFA) are the same, so there will be duplicative rents for each county in a metropolitan area.

Rents for units above 4 bedrooms are found by adding 15 percent to the 4-bedroom rent for each additional bedroom. The rent for Single Room Occupancy is 75 percent of the 0 bedroom rent.

National Science Foundation, Science Resources Statistics

Conducts surveys that measure the number and demographic characteristics of individuals trained as, or working as, scientists and engineers, and participates in international collaborations to yield comparable measures of the same items. In addition, other components of NSF provide funding in support of biological sciences research databases and social science research and studies, such as the Panel Study of Income Dynamics, the General Social Survey, and the National Election Studies. Collects, publishes, and analyzes data on the size and health of U.S. research and development enterprises. Four annual surveys provide information on research and development funded and performed by government, industry, and universities, and a periodic survey provides comparable information on the nonprofit sector. The division also conducts a biennial survey on academic and biomedical research facilities, including aspects of cyber-infrastructure, and has begun design work on an information collection on instrumentation in s

United States Geological Survey

Collects data on nonfuel minerals and materials, including mineral resources, production, demand, use, recycling, and trade. Collects and maintains data on the quality, availability, and use of the Nation's water, including streamflow data for flood forecasting; streamflow data that help determine water allocations for agriculture, industry, and domestic supply; streamflow data for hydropower, navigation, instream habitat, engineering design of bridges and flood control structures, and other purposes; water quality data used by EPA and the states for compliance with the Clean Water Act and other regulations; and data on the availability and quality of ground water that help determine sustainability of supplies for the future. Through its Biological Resources Discipline, collects and analyzes data on birds and fish to determine trends in environmental contamination, tracks species and their habitats, and studies migratory game and nongame birds. Data from the annual breeding bird survey are used to identify sp

Department Of Veterans Affairs

The National Cemetery Administration (NCA) analyzes projections of the veteran population for capacity and construction planning for future VA burial sites. The Office of Policy and Planning (OPP) develops estimates and projections of the veteran population, collects information on the socioeconomic characteristics of veterans, surveys users and non-users of VA benefit programs, evaluates VA programs, and conducts actuarial studies. The Veterans Benefits Administration (VBA) supports continuing and new surveys of veterans and beneficiaries who receive VBA benefits and use its services. The surveys cover VA compensation and pension, education, loan guaranty, vocational rehabilitation and employment services, and insurance programs.
